Wood Systems, Inc. Is a Tulsa based company, dedicated to service, quality, variety of products and competitive pricing.

SERVICE

With state-of the art Weinig molder and grinder along with a complete inventory of hardwood lumber, Wood Systems will set up and run your molding with the shortest lead time available in the nation. Our trained personnel can recommend molding designs usage as well as complete necessary take-offs for your project.

QUALITY

The quality of wood moldings is determined by the precision knife grinding and feed speed of the machine. Defecting splits and knots in the wood is also critical. The Weinig technology employs 6,000 rpm spindle speeds, which create greater knife cuts per inch and nets greater quality molding. Matched with highly skilled machine operators, set-up and grinding specialists, the finished product is of excellent quality, with exact matching from run to run.

VARIETY OF MOLDINGS

With over 1900 patterns of stock knives, there is a wide selection of moldings not requiring a knife grinding charge. Custom moldings to match any profile are welcome at Wood Systems, as well as radius moldings and arched or curved patterns. Moldings run out of any wood species; pre-finishing to match your custom finish; and, cutting to specified lengths all lend to the variety of products available.

COMPETITIVE PRICING

Due to volume purchasing of the lumber, coupled with quick set-up times, Wood systems can offer very competitive prices utilizing top quality material. Call for current price quotations or bring in your plans for complete molding consultations.

This catalog can be a helpful tool in planning and designing a new project or remodel. The patterns represented are a blend of older traditional patterns and contemporary molding. They have been carefully selected to give a broad base of design options. At Wood Systems, we look at fine woodworking as an art form as well as a precision craft.
